 **paradiso**

15 years warranty

Because of its characteristics ingredient robimetria (alkaloid), the excellent heart of wood formation (>90%) and the resulting minimum share of sap wood, robinia timber is extremely resistant to infestation by fungi or insects that cause decomposition and destroy the wood. This gives robinia timber, when used out of doors with ground contact, a natural life span of up to 50 years!

Furthermore, robinia wood has excellent technical properties. While being extremely hard, it is very tough and highly elastic and has very good strength values. The naturak tears caused by swelling and shrinking is another characteristic of robinia timber. Robinia comes in natural shapes, splint-free and sanded. To protect the surface, eibe uses natural oil glazes that are saliva and sweat resistant.
